ABOUT ME

I hold a degree in Physics from the University of Salamanca, with a strong foundation in mathematical modelling, statistics and data analysis. I am currently pursuing a Master's degree in Data Science at the University of Valencia and have hands-on experience in applied AI, including machine learning and natural language processing, gained during an internship at the AIR Institute.

I am particularly interested in Generative AI and LLM-based systems, and I am seeking junior Data Scientist roles where I can contribute to building and deploying data-driven solutions in real-world products.

TECHNICAL SKILLS

- Programming:** Python, SQL, R, Fortran
- Data & ML Libraries:** NumPy, Pandas, Scikit-learn
- Deep Learning Frameworks:** TensorFlow, PyTorch, Keras
- MLOps & Tools:** Git, AWS, Jupyter Notebook, MongoDB, Cassandra, LaTeX
- Languages:** Spanish (native), English (B1+: Professional communication and technical proficiency)

EXPERIENCE

- Data Scientist – Internship** Jul 2024 – Aug 2024
AIR Institute (International Centre for Artificial Intelligence Research) Spain
- I developed machine learning models for occupational risk analysis, enabling the classification and identification of workplace hazards. The results obtained enabled risks to be identified accurately.
 - I performed feature extraction on candidate data through CV and sentiment analysis using Whisper and PySentimiento. I analysed tone of voice, emotions and expressions, identifying patterns in the statistical structure that improved the accuracy of the shortlisting model.

PROJECTS

- Multi-Agent System for Synchronous Energy Dispatch in Smart Grids** Present
- Developed a multi-agent framework using LangGraph to optimize synchronous power dispatch and grid stability under high renewable volatility (Python, TensorFlow, Transformers, statsmodels, LangGraph).
- Clickbait Detection in News Headlines**
- Developed an NLP model to detect clickbait using cosine similarity and topic modeling (Python, Scikit-learn, Transformers).
- Calorie Estimation from Food Images**
- Built a deep learning pipeline to estimate calories from images using CNN models (Python, TensorFlow, Hugging Face).
- Exploratory Analysis of Labour Market Data**
- Performed EDA on Spanish labour market data to identify gender inequality patterns (R, tidyverse, ggplot2).

EDUCATION

- Master's in Data Science** Sept 2025 – present
University of Valencia Spain
- GPA: 8.86/10
- Bachelor's Degree in Physics** Sept 2021 – Jul 2025
University of Salamanca Spain
- GPA: 7.25/10
